

For Claude: REQUIRED SUB-SKILL: Use superpowers:executing-plans to implement this plan task-by-task.

Goal: Build a B2C client-facing landing page (hub + 3 spoke pages + Banking Roadmap form) as a new `client` landing type in the WTP2 multi-landing system. **Architecture:** New `VITE_LANDING=client` landing type following existing multi-landing pattern. Hub page at index (/), spoke pages at `/uk-non-dom` , `/german-exit-tax` , `/dutch-box3` , roadmap form at `/roadmap` . Uses `NavbarMinimal` (focused landing pattern) but with multiple routes (like main landing). EN-only for v1, RU translation in separate pass. **Tech Stack:** React 19 + TypeScript + Vite 7 + custom CSS + react-hook-form + Zod + Bitrix24 webhook **Design doc:** `docs/plans/2026-02-26-b2c-client-landing-design.md`

Task 1: Add `client` landing type to config

Files:

- Modify: `src/config/landing.ts`

Step 1: Update LandingId type

In `src/config/landing.ts` , change the type union:

```
`typescript
// BEFORE
export type LandingId = 'main' | 'banking' | 'realestate' | 'partners'

// AFTER
export type LandingId = 'main' | 'banking' | 'realestate' | 'partners' | 'client'
`
```

Step 2: Add subdomain mapping

In the `SUBDOMAIN_MAP` record, add:

```
`typescript const SUBDOMAIN_MAP: Record = { main: '', banking: 'banking.', realestate: 'realestate.', partners: 'partners.', client: 'client.', // NEW } `
TypeScript compiles
Run:  cd "/Users/konstantin/Desktop/Antygravity folder/sync/WTP2" && npx tsc --noEmit
Expected: No errors
```

Step 4: Commit ``bash git add src/config/landing.ts git commit -m "feat: add client landing type to config" ``

Task 2: Add meta tags and build output for client landing

Files:

- Modify: `vite.config.ts`

Step 1: Add client meta tags

In `vite.config.ts` , in the `meta` record, add the `client` entry after `partners` :

```
`typescript client: { en: { title: 'WTP - UAE Relocation Partner | Exit Coordination & Banking-First Setup', description: 'WTP orchestrates your complete relocation – coordinated exit from your jurisdiction and bankable company setup in the UAE through our international partner network.', keywords: 'UAE relocation, company formation UAE, corporate banking Dubai, exit tax coordination, UK non-dom UAE, German exit tax, Banking-First, Golden Visa', }, ru: { title: 'WTP - Релокация бизнеса в ОАЭ | Координация выхода и Banking-First', description: 'WTP координирует вашу полную релокацию – выход из текущей юрисдикции и создание банковской структуры в ОАЭ через международную партнерскую сеть.', keywords: 'релокация ОАЭ, регистрация компании ОАЭ, корпоративный банкинг Дубай, координация выхода, Banking-First, Golden Visa', }, }, `
Step 2: Verify build works
Run:  cd "/Users/konstantin/Desktop/Antygravity folder/sync/WTP2" && VITE_LANDING=client VITE_LANG=en npx tsc --noEmit
Expected: No errors (pages don't exist yet, but config is valid)
```

Step 3: Commit ``bash git add vite.config.ts git commit -m "feat: add client landing meta tags to vite config" ``

Task 3: Add build scripts for client landing

Files:

- Modify: `package.json`

Step 1: Add dev and build scripts

In `package.json` `scripts` section, add after the `partners` scripts:

```
`json "dev:client": "VITE_LANDING=client vite", "dev:client:ru": "VITE_LANDING=client VITE_LANG=ru vite", "build:client:en": "VITE_LANDING=client VITE_LANG=en tsc && VITE_LANDING=client VITE_LANG=en vite build", "build:client:ru": "VITE_LANDING=client VITE_LANG=ru tsc && VITE_LANDING=client VITE_LANG=ru vite build", `
Step 2: Update build:all script
Add client builds to the build:all script:

`json "build:all": "npm run build:main:en && npm run build:main:ru && npm run build:banking:en && npm run build:banking:ru && npm run build:realestate:en && npm run build:realestate:ru && npm run build:partners:en && npm run build:partners:ru && npm run build:client:en && npm run build:client:ru", `
Step 3: Commit `bash git add package.json git commit -m "feat: add client landing build scripts" `
```

Task 4: Add Zod validation schema for Banking Roadmap form

Files:

- Modify: `src/lib/validations.ts`

Step 1: Add roadmap form schema

At the end of `src/lib/validations.ts`, add:

```
`typescript // Banking Roadmap Request Form (5 fields) export const roadmapFormSchema = z.object({ name: z.string().min(2, 'Please enter your name') .max(100, 'Name is too long'), email: z.string().email('Please enter a valid email address'), country: z.string().min(2, 'Please select your country of residence'), situation: z.string().min(20, 'Please describe your situation in more detail') .max(2000, 'Description is too long'), consentPrivacy: z.literal(true, { errorMap: () => ({ message: 'You must agree to the Privacy Policy' }) }, ), })

export type RoadmapFormData = z.infer`
```

Step 2: Verify TypeScript compiles

Run: `cd "/Users/konstantin/Desktop/Antygravity folder/sync/WTP2" && npx tsc --noEmit`
Expected: No errors

Step 3: Commit ``bash git add src/lib/validations.ts git commit -m "feat: add Banking Roadmap form validation schema" ``

Task 5: Add Bitrix24 integration for roadmap form

Files:

- Modify: `src/lib/bitrix.ts`

Step 1: Add roadmap submission function

At the end of `src/lib/bitrix.ts`, add:

```
`typescript // Banking Roadmap request (B2C client form) export async function submitRoadmapToBitrix(data: { name: string email: string country: string situation: string }): Promise { const comments = [ Source: B2C Client Landing — Banking Roadmap Request , Country of residence: ${data.country} , '', Situation: , data.situation, ].join('\n') return createLead({ TITLE: WTP B2C Roadmap: ${data.name} (${data.country}) , NAME: data.name, EMAIL: [{ VALUE: data.email, VALUE_TYPE: 'WORK' }], COMMENTS: comments, SOURCE_ID: 'WEB', }) }`
```

Step 2: Verify TypeScript compiles

Run: `cd "/Users/konstantin/Desktop/Antygravity folder/sync/WTP2" && npx tsc --noEmit`
Expected: No errors

Step 3: Commit ``bash git add src/lib/bitrix.ts git commit -m "feat: add Banking Roadmap Bitrix24 integration" ``

Task 6: Add country constants for roadmap form

Files:

- Modify: `src/lib/constants.ts`

Step 1: Add B2C client countries list

Add a new exported array in `src/lib/constants.ts`:

```
`typescript export const CLIENT_COUNTRIES = [ { value: 'GB', label: 'United Kingdom' }, { value: 'DE', label: 'Germany' }, { value: 'NL', label: 'Netherlands' }, { value: 'FR', label: 'France' }, { value: 'IT', label: 'Italy' }, { value: 'ES', label: 'Spain' }, { value: 'CH', label: 'Switzerland' }, { value: 'AT', label: 'Austria' }, { value: 'BE', label: 'Belgium' }, { value: 'SE', label: 'Sweden' }, { value: 'NO', label: 'Norway' }, { value: 'DK', label: 'Denmark' }, { value: 'IN', label: 'India' }, { value: 'CN', label: 'China' }, { value: 'HK', label: 'Hong Kong' }, { value: 'SG', label: 'Singapore' }, { value: 'SA', label: 'Saudi Arabia' }, { value: 'AE', label: 'UAE (already here)' }, { value: 'NG', label: 'Nigeria' }, { value: 'ZA', label: 'South Africa' }, { value: 'US', label: 'United States' }, { value: 'CA', label: 'Canada' }, { value: 'AU', label: 'Australia' }, { value: 'OTHER', label: 'Other' }, ]`  
`Step 2: Commit`bash git add src/lib/constants.ts git commit -m "feat: add client country list for roadmap form`
```

Task 7: Add i18n translation keys (EN) for client landing

Files:

- Modify: `src/lib/LanguageContext.tsx`

Step 1: Add all client landing keys to English translations

In `src/lib/LanguageContext.tsx`, find the `en`:{ section of the translations object and add the following block (before the closing `}` of the `en` section):

```
`typescript // ===== // CLIENT LANDING (B2C) // =====
// Navbar
'cl.nav.home': 'Home',
'cl.nav.method': 'Our Method',
'cl.nav.roadmap': 'Get Roadmap',
```

```

// Hero
'cl.hero.label': 'For Business Owners & Investors',
'cl.hero.title': 'Relocating to the UAE? We handle both sides.',
'cl.hero.subtitle': 'Coordinated exit from your home jurisdiction + bankable company setup in the UAE. One process, one team, partner firms in key markets.',
'cl.hero.cta': 'Get Your Banking Roadmap',
'cl.hero.ctaSub': 'Free. 5-7 business days. No commitment.',

// The Bridge section
'cl.bridge.label': 'Two Sides, One Process',
'cl.bridge.title': 'Your UAE provider handles the UAE. Who handles the exit?',
'cl.bridge.exitTitle': 'Exit Side',
'cl.bridge.exitDesc': 'Partner firms in the UK, Germany, and the Netherlands handle tax exit, capital gains, regulatory compliance, and wind-down of local structures.',
'cl.bridge.entryTitle': 'Entry Side',
'cl.bridge.entryDesc': 'WTP handles UAE company formation, banking, visa, tax residency, and substance – using our Banking-First methodology.',
'cl.bridge.bridgeTitle': 'The Bridge',
'cl.bridge.bridgeDesc': 'We synchronize both sides into one timeline. Your exit advisor and our team work from a shared playbook, so nothing falls through the cracks.',
'cl.bridge.otherCountry': 'Coming from another jurisdiction? We coordinate with your existing advisor using our standard cross-border protocol.',

// Who This Is For section
'cl.who.label': 'Is This For You?',
'cl.who.title': 'We work with clients who need more than just a company registration',
'cl.who.card1.title': 'Restructuring',
'cl.who.card1.desc': 'You\'re relocating your business to the UAE and need a structure that actually opens a bank account.',
'cl.who.card2.title': 'Tax Residency',
'cl.who.card2.desc': 'You need UAE tax residency that withstands scrutiny from your home country\'s tax authority.',
'cl.who.card3.title': 'Golden Visa + Investment',
'cl.who.card3.desc': 'You\'re investing in UAE property and want the visa, company structure, and tax planning handled as one.',
'cl.who.card4.title': 'Compliance Rescue',
'cl.who.card4.desc': 'You already have a UAE company but your bank rejected you – or your substance is questionable.',

// Banking-First Method section

'cl.nl.exit.desc': 'Our Dutch partner firm handles the Box 2/Box 3 transition planning, substantial interest tax calculations, and optimal emigration timing. We handle the UAE side: company structure, banking, and substance that satisfies Dutch Belastingdienst requirements for genuine relocation.',
'cl.nl.cta': 'Get Your Banking Roadmap',
`
```

Step 2: Add stub RU translations

In the `ru` section, add stubs that fall back to English (so TypeScript and the app still work):

```
`typescript // CLIENT LANDING (B2C) – RU stubs (to be translated) 'cl.hero.title': 'Relocating to the UAE? We handle both sides.', // ... (copy all cl.* keys with same EN values as stubs) `
```

Note: For v1, English is the primary language. RU translation is a separate task.

Step 3: Verify TypeScript compiles

Run: `cd "/Users/konstantin/Desktop/Antygravity folder/sync/WTP2" && npx tsc --noEmit`

Expected: No errors

```
Step 4: Commit `bash git add src/lib/LanguageContext.tsx git commit -m "feat: add i18n keys for B2C client landing (EN)"`
```

Task 8: Create Hub page component — ClientLandingPage.tsx

Files:

- Create: `src/pages/ClientLandingPage.tsx`
- Create: `src/pages/ClientLandingPage.css`

Step 1: Create CSS file

Create `src/pages/ClientLandingPage.css` with client landing styles. Use `.cl-` prefix (following existing convention: `.bf-` for banking, `.re-` for real estate):

```
`css /* ===== CLIENT LANDING (B2C) – Hub Page Styles Prefix: .cl- ===== */
/ Hero /
.cl-hero {
min-height: 80vh;
display: flex;
flex-direction: column;
justify-content: center;
padding: 120px 0 80px;
}

.cl-hero h1 {
font-size: 56px;
font-family: var(--font-serif);
line-height: 1.15;
max-width: 700px;
margin-bottom: 24px;
}

.cl-hero .subtitle {
font-size: 18px;
line-height: 1.6;
max-width: 600px;
color: var(--text-secondary);
margin-bottom: 40px;
}

.cl-hero-cta-sub {
margin-top: 12px;
font-size: 13px;
color: var(--text-tertiary);
}
```

```

/ Bridge Section /
.cl-bridge {
padding: 80px 0;
}

.cl-bridge-grid {
display: grid;
grid-template-columns: 1fr auto 1fr;
gap: 32px;
align-items: start;
margin-top: 48px;
}

.cl-bridge-side {
padding: 32px;
background: var(--bg-card);
border-radius: var(--radius-lg);
border: 1px solid var(--border-subtle);
}

.cl-bridge-side h3 {
font-family: var(--font-serif);
font-size: 20px;
margin-bottom: 12px;
}

.cl-bridge-connector {
display: flex;
flex-direction: column;
align-items: center;
justify-content: center;
padding: 24px 16px;
min-height: 200px;
}

.cl-bridge-connector .cl-arrow {
width: 2px;
height: 60px;
background: var(--border-subtle);
position: relative;
}

.cl-bridge-connector .cl-bridge-label {
font-family: var(--font-serif);
font-size: 14px;
font-weight: 600;
letter-spacing: 0.05em;
text-transform: uppercase;
color: var(--text-tertiary);
writing-mode: vertical-rl;
text-orientation: mixed;
padding: 16px 0;
}

.cl-bridge-bottom {
margin-top: 24px;
padding: 20px 32px;
background: var(--bg-card);
border-radius: var(--radius-md);
border: 1px solid var(--border-subtle);
font-size: 14px;
color: var(--text-secondary);
font-style: italic;
}

/ Who This Is For /
.cl-who {
padding: 80px 0;
}

.cl-who-grid {
display: grid;
grid-template-columns: repeat(2, 1fr);
gap: 24px;
margin-top: 48px;
}

.cl-who-card {
padding: 32px;
background: var(--bg-card);
border-radius: var(--radius-lg);
border: 1px solid var(--border-subtle);
transition: transform 0.3s ease, box-shadow 0.3s ease;
}

.cl-who-card:hover {
transform: translateY(-4px);
box-shadow: 0 8px 32px rgba(0, 0, 0, 0.08);
}

.cl-who-card h3 {
font-family: var(--font-serif);
font-size: 20px;
margin-bottom: 8px;
}

```

```

.cl-who-card p {
font-size: 14px;
color: var(--text-secondary);
line-height: 1.6;
}

/ Banking-First Method /
.cl-method {
padding: 80px 0;
background: var(--text-primary);
color: #FFFFFF;
margin: 0 -40px;
padding-left: 40px;

padding-right: 20px;
}
}
```

Step 2: Create ClientLandingPage.tsx component

Create src/pages/ClientLandingPage.tsx :

```
`typescript import React from 'react' import { Link } from 'react-router-dom' import Button from '../components/Button' import { useLanguage } from '../lib/LanguageContext' import
{ trackCtaClick } from '../lib/analytics' import './ClientLandingPage.css'
const ClientLandingPage: React.FC = () => {
const { t } = useLanguage()

return (
<div>
</div>

</ Hero />

{t('cl.hero.label')}

{t('cl.hero.title')}

{t('cl.hero.subtitle')}

href="/roadmap"
onClick={() => trackCtaClick('roadmap', 'client_hero')}
>
{t('cl.hero.cta')}

{t('cl.hero.ctaSub')}

</ The Bridge />

{t('cl.bridge.label')}

{t('cl.bridge.title')}

{t('cl.bridge.exitTitle')}

{t('cl.bridge.exitDesc')}

{t('cl.bridge.bridgeTitle')}

{t('cl.bridge.entryTitle')}

{t('cl.bridge.entryDesc')}

{t('cl.bridge.otherCountry')}

</ Who This Is For />

{t('cl.who.label')}

{t('cl.who.title')}

</>

{[1, 2, 3, 4].map(i => (

{t( cl.who.card${i}.title )}
```

```
{t( cl.who.card${i}.desc )}
```

```
)}}
```

```
{/ Banking-First Method /}
```

```
{t('cl.method.label')}
```

```
{t('cl.method.title')}
```

```
{t('cl.method.subtitle')}
```

```
{{1, 2, 3, 4}.map(i => (
```

```
{t( cl.method.step${i}.num )}
```

```
{t( cl.method.step${i}.title )}
```

```
{t( cl.method.step${i}.desc )}
```

```
)}}
```

```
{/ Jurisdiction Comparison /}
```

```
{t('cl.compare.label')}
```

```
{t('cl.compare.title')}
```

```
{{'uae', 'sg', 'pt', 'ch', 'mt'}.map(code => (
```

```
)}}
```

{T('CL.COMPARE.COL.JURISDICTION')}	{T('CL.COMPARE.COL.CORPTAX')}	{T('CL.COMPARE.COL.SETUP')}	{T('CL.COMPARE.COL.BANKING')}	{T('CL.COMPARE.COL.VISA')}	{T('CL.COMPARE.COL.SU
{code == 'uae' ? 'UAE' : code == 'sg' ? 'Singapore' : code == 'pt' ? 'Portugal' : code == 'ch' ? 'Switzerland' : 'Malta'}	{t(cl.compare.\${code}.tax) }	{t(cl.compare.\${code}.set-up)}	{t(cl.compare.\${code}.bank-ing)}	{t(cl.compare.\${code}.visa)}	{t(cl.compare.\${code} stance)}

```
{t('cl.compare.conclusion')}
```

```
{/ How We're Different /}
```

```
{t('cl.diff.label')}
```

```
{t('cl.diff.title')}
```

```
{{1, 2, 3, 4, 5, 6}.map(i => (
```

```

    {t< cl.diff.item${i}.title >}

    {t< cl.diff.item${i}.desc >}}

  >
  </ Common Scenarios />

  {t('cl.scenarios.label')}

  {t('cl.scenarios.title')}

  < />

  [['uk', 'de', 'nl'].map(code => (

    {t< cl.scenarios.${code}.title >}}

    {t< cl.scenarios.${code}.desc >}}

    /${code === 'uk' ? 'uk-non-dom' : code === 'de' ? 'german-exit-tax' : 'dutch-box3'}}>
    {t< cl.scenarios.${code}.link >}} →

  >
  </ FAQ />

  {t('cl.faq.label')}

  {t('cl.faq.title')}

  < />

  [[1, 2, 3, 4, 5, 6, 7].map(i => (
    ► {t< cl.faq.q${i} >}}

  >
  </ Final CTA />

  {t('cl.cta.title')}

  {t('cl.cta.text')}

  href="/roadmap"
  onClick={() => trackCtaClick('roadmap', 'client_bottom')}
  >
  {t('cl.cta.button')}

  {t('cl.cta.sub')}

  < />
}

export default ClientLandingPage
`

Step 3: Verify TypeScript compiles
Run: cd "/Users/konstantin/Desktop/Antygravity folder/sync/WTP2" && npx tsc --noEmit
Expected: No errors

Step 4: Commit `bash git add src/pages/ClientLandingPage.tsx src/pages/ClientLandingPage.css git commit -m "feat: create B2C client hub landing page" `

```

Task 9: Create Banking Roadmap form page

Files:

- ### Step 1: Create RoadmapPage component

```
`typescript import React, { useState } from 'react' import { useForm
```

Step 2: Verify TypeScript compiles

Expected: No errors

Step 3: Commit ``bash git add src/pages/RoadmapPage.tsx git commit -m "feat: create Banking Roadmap request form page" ``

Task 10: Create spoke page component (reusable)

Files:

- Create: `src/pages/SpokePage.tsx`

Step 1: Create reusable SpokePage

All three spoke pages share the same structure. Create one component that takes a market prop:

```
` typescript import React from 'react' import Button from '../components/Button' import { useLanguage } from '../lib/LanguageContext' import { trackCtaClick } from '../lib/analytics'

interface SpokePageProps {
  market: 'uk' | 'de' | 'nl'
}
```

```
const SpokePage: React.FC = ({ market }) => {
const { t } = useLanguage()
const prefix = cl.${market}
```

```
return (
```

```
{t( ${prefix}.label )}
```

$$\{t(\text{\textit{\$}}\{\text{prefix}\}.\text{title})\}$$

```
{t( ${prefix}.subtitle )}
```

```
{t( ${prefix}.trigger.title )}
```

```
{t( ${prefix}.trigger.desc )}
```

$$\{t(\text{\textit{\$}}\{\textit{prefix}\}.\textit{risk}.\textit{title})\}$$

```

    {[1, 2, 3].map(i => (
    • {t( ${prefix}.risk.item${i} )})
      )})

```

```
{t( ${prefix}.exit.title )}
```

```
{t( ${prefix}.exit.desc )}
```

```
trackCtaClick('roadmap', spoke_${market} )} > {t( ${prefix}.cta )}  
{t('cl.cta.sub')}
```

) }

```
export default SpokePage
```

Step 2: Verify TypeScript compiles

```
Run: cd "/Users/konstantin/Desktop/Antygravity folder/sync/WTP2" && npx tsc --noEmit
```

Expected: No errors

Step 3: Commit ``bash git add src/pages/SpokePage.tsx git commit -m "feat: create reusable SpokePage component for trigger markets"`

Task 11: Wire up client landing routes in App.tsx

Files:

- Modify: `src/App.tsx`

Step 1: Add lazy imports for client landing

After the existing `PartnersLandingPage` conditional import, add:

```
typescript // CLIENT landing - hub + spokes + roadmap form const ClientPages = LANDING_ID === 'client' ? { ClientLandingPage: lazy(() => import('./pages/ClientLandingPage')),
RoadmapPage: lazy(() => import('./pages/RoadmapPage')), SpokePage: lazy(() => import('./pages/SpokePage')) }, null ` Step 2: Add client routes
```

Inside the `lazy({})` block, after the existing landing routes, add:

```
` typescript {ClientPages && ( < > } /> } /> } /> } /> } /> } }
```

Note: The `SpokePage` component receives the `market` prop. Since lazy-loaded components are rendered via `lazy`, the prop needs to be passed through. If the current `wrapper` doesn't support this, we may need to create wrapper components or adjust the pattern. Check the existing `Lazy wrapper` – it wraps `children`, so `SpokePage` should work since the `SpokePage` is a child element.

Step 3: Verify TypeScript compiles

Run: `cd "/Users/konstantin/Desktop/Antygravity folder/sync/WTP2" && npx tsc --noEmit`

Expected: No errors

Step 4: Commit `` bash git add src/App.tsx git commit -m "feat: add client landing routes to App.tsx" ``

Task 12: Test dev server

Step 1: Start client landing dev server

Run: `cd "/Users/konstantin/Desktop/Antygravity folder/sync/WTP2" && npm run dev:client`

Step 2: Verify pages load

Open in browser and check:

- `http://localhost:5173/` – Hub page loads, all sections visible
- `http://localhost:5173/roadmap` – Form page loads, fields work
- `http://localhost:5173/uk-non-dom` – UK spoke loads
- `http://localhost:5173/german-exit-tax` – German spoke loads
- `http://localhost:5173/dutch-box3` – Dutch spoke loads
- `http://localhost:5173/privacy` – Shared privacy page loads
- `http://localhost:5173/terms-of-service` – Shared terms page loads

Step 3: Check responsive

Resize browser to 900px and 480px. Verify:

- Bridge grid collapses to single column
- Method steps collapse to 2-column then single-column
- Hero text sizes reduce
- Navigation hamburger works

Step 4: Verify form submission (dry run)

On roadmap page:

1. Fill all fields
2. Check consent box
3. Submit – should show "Sending..." then success/error message
4. Check browser console for any errors

Task 13: Production build test

Step 1: Run production build

Run: `cd "/Users/konstantin/Desktop/Antygravity folder/sync/WTP2" && npm run build:client:en`

Expected: Build succeeds, output in `dist/client-en/`

Step 2: Preview production build

Run: `cd "/Users/konstantin/Desktop/Antygravity folder/sync/WTP2" && npx vite preview --outDir dist/client-en`

Step 3: Verify meta tags

Check `dist/client-en/index.html` :

- `<title>`
- `<meta>`
